

Day 6 Terraform

IAC (Infrastructure As Code)

- With help of terraform - multiple automation is possible.
- Third-party tool
- partner providers : AWS
Azure
- Terraform script is expressed as manifesto files
Oracle.
tool or script here.

~~•~~ > terraform.

- Shows all commands there.
- To check AWS CLI version
- > aws --version.

Terraform Documentation

registry.terraform.io

Terraform - practice

```
provider "aws" {  
  region = "us-east-1"  
}
```

Access & secret key can be given here but our friend can also access it through CLI but bill will be ours.
in terminal.

- `cd './terraform-practice'`
- Initiates and installs the resources of providers
 - > `terraform init.`

tags are used as reference with that we ~~can~~ can call it easily.

resource.

- To check whether error is there or not.
 - > `terraform validate`

- Suggests the changes to be perform.
 - > `terraform plan.`

- Applies the changes.
 - > `terraform apply`

- To check whether the user is not created or not in AWS console.

- ~~to~~ which are all developed with terraform can be deleted using terraform itself.

- > `terraform destroy.`
